

The field of technology is changing rapidly. Workers are using sophisticated materials, systems and procedures to do their jobs. Part of the process for any field, whether it be automotive technology, health care, agriculture, or printing – to name a few – is hazardous materials handling. Employees and their employers must follow ever-increasing regulations enacted to save our environment.

The "Environmental, Health and Safety Issues" CD-ROM will help students and workers understand the critical role they play in keeping themselves, their communities, and their co-workers safe and healthy.

# Environmental, Health and Safety Issues in Health Care Occupations

- Dental Technician
- Electroneurodiagnostic Technician
- Health Worker
- Laboratory Technician
- Nurse
- Pharmacy Technician
- Physical Therapy Technician
- Radiologic Technologist
- Respiratory Therapy Technician

# Environmental, Health and Safety Issues

In order to understand their place among the issues of environmental health and safety, workers must understand the materials, processes and regulations involved. The Advanced Technology Environmental Education Center (ATEEC) has produced a set of modules to help students and employees protect the environment and themselves by understanding the current workplace and instituting the best practices that will help them remain safe and healthy throughout their careers.

The modules introduce environmental, health and safety concepts in several technical and health care occupations. The CD-ROM program introduces environmental, health, and safety issues and hazards in various health care occupations. PowerPoint presentations deliver general and non-technical information on U.S. regulations that relates directly to the job titles, OSHA, EPA, and DOT .

# Health Care Occupations

Many environmental issues are discussed throughout the PowerPoint presentations which cover biological, chemical, and physical hazards, to name a few. Occupations featured in the Health Care module include:

- Dental Technician
- Electroneurodiagnostic Technician
- Health Worker
- Laboratory Technician
- Nursing
- Pharmacy Technician
- Physical Therapy Technician
- Radiologic Technologist
- Respiratory Therapy Technician

Health care workers must learn to protect themselves before they can provide optimal care to their patients. Environmental, biological, chemical and physical hazards are highlighted throughout the Health Care modules, featuring:

- Hazard chemicals
- Drug exposures
- Ergonomic hazards
- Workplace violence
- Bloodborne pathogens
- Infectious microbes
